

Update History:

Version	Date	Change
V1	Jun. 17, 2019	We have released the 240-bus test system. The documents include system description, smart meter data, OpenDSS model, and Matlab code for quasi-static time-series simulation.
V2	Oct. 16, 2019	In the OpenDss model, the total number of LTC tap positions has been changed from 16 to 32.
V3	Feb. 17, 2020	We have added a Buscoords.dss file into the OpenDSS model. The Buscoords.dss includes the relative longitudes and latitudes of all buses.
V4	Aug. 13, 2020	We have updated the impedances of all distribution service transformers in the system description and OpenDSS model. The new impedances reflect the true values of service transformers.
V5	Mar. 2, 2021	For the system description, we have added two figures to illustrate the connection between load and service transformer; added the number of customers supplied by each service transformer.
